Office Action Summary	Examiner	Art Unit				
	Vuthe Siek	2825				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status						
1) Responsive to communication(s) filed on 01 O	ctober 2003					
/ 						
3) Since this application is in condition for allowar	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is					
closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
4) Claim(s) 1-4,7-11,14-16 and 19-26 is/are pending in the application.						
4a) Of the above claim(s) is/are withdrawn from consideration.						
5) Claim(s) is/are allowed.						
6)⊠ Claim(s) <u>1-4,7-11,14-16 and 19-26</u> is/are rejection 7)□ Claim(s) is/are objected to.	ica.					
	r election requirement.					
8) Claim(s) are subject to restriction and/or election requirement. Application Papers						
9) The specification is objected to by the Examiner. 10) The drowing(s) filed onis/are: a) □ accepted or b) □ objected to by the Examiner.						
10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).						
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).						
11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. §§ 119 and 120 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some * c) None of:						
 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No 3. Copies of the certified copies of the priority documents have been received in this National Stage 						
application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received. 13) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application) since a specific reference was included in the first sentence of the specification or in an Application Data Sheet.						
37 CFR 1.78.						
a) The translation of the foreign language provisional application has been received.						
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121 since a specific reference was included in the first sentence of the specification or in an Application Data Sheet. 37 CFR 1.78.

DETAILED ACTION

1. This office action is in response to application 10/060,156 filed on 1/30/2002. Claims 1-4, 7-11, 14-16 and 19-26 remain pending in the application.

Claim Objections

2. Claims 9-10, 14-15 and 19-20 are objected to because of the following informalities: the above claims have dependency problem, since a claim can't depend on a canceled claim. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-4, 7-11, 14-16 and 19-26 are rejected under 35 U.S.C. 102(e) as being anticipated by Roethig et al. (6,487,705).
- 5. As to claims 1, 11, 16, 21 and 24, Roethig et al. teach electronic design automation tools including embedded timing analysis, optimization and placement of cells with embedded timing analysis and optimization. The method can include designing an integrated circuit by routing with embedded timing analysis and optimization; performing reference timing analysis and embedded timing analysis using

Application/Control Number: 10/060,156

Art Unit: 2825

a parasitic estimation model (extracted timing model representing a second model). The method compares at least two slack distributions resulting from timing analyses, where a first slack distribution representing a first model and a second slack distribution corresponding to a parasitic estimation model (refereed to as an extracted timing model). Because the parasitic estimation model (second model) reflected the first model, the second model is an abstraction of the first model. The method can include calculating and comparing autocorrelation function of slack distributions. The method can also include calculating interrecorrelation functions of slack distributions (see summary; cols. 6-8; Figs. 3A-3B, 4-6). Thus, Roethig et al. teach receiving a reference timing value (from a reference timing analysis); receiving an extracted model timing value (from embedded timing analysis); determining difference between said reference timing value and said extracted model timing value (comparison from resulting of timing analyses). Also Roethig et al. teach outputting result when the comparison is successful.

Page 3

- 6. As to claims 2-3, Roethig et al. teach database for storing reference design, design data and information related to performing timing analyses. Thus, databases can also be used to store data representing the predetermined permissible range, since the predetermined permissible range is considered to be a required accuracy that may be limited to be within an error range when performing above comparison.
- 7. As to claims 4, 14-15, and 19-20, Roethig et al. teach generating a structural model representative of a signal path and parasitic estimation model (predetermined extracted timing model) (col. 6, lines 38-43; Figs. 3A).

Application/Control Number: 10/060,156

Art Unit: 2825

8. As to claims 7-10, Roethig et al. teach the comparison between timing reference and timing from embedded timing analysis would establish a satisfactory match or mismatch (read as whether the difference of timings is within a satisfactory range). Identification and correction of the cause of mismatch result in change of the timing constraints and exceptions from designer, or in the selection of a different parasitic estimation model. Thus, timing analyses and optimization as taught by Roethig et al. would require a controller as claimed in order to establish a satisfactory match or to establish the difference of timings to be within the predetermined permissible range.

Page 4

9. As to claims 22-23 and 25-26, Roethig et al. teach the comparison between timing reference and timing from embedded timing analysis would establish a satisfactory match or mismatch (col. 6-6). Identification and correction of the cause of mismatch result in change of the timing constraints and exceptions from designer, or in the selection of a different parasitic estimation model. Thus, timing analyses and optimization as taught by Roethig et al. would require a controller as claimed in order to establish a satisfactory match or to establish the difference of timings to be within the predetermined permissible range. Thus the result of above comparison provides a difference value in order to determine whether the difference value is within an acceptable pre-determined threshold value. If the difference value is not within the acceptable threshold value, another parasitic estimation model (representing second model) corresponding to a first model (first reference slack) can be selected (col. 6).

Application/Control Number: 10/060,156 Page 5

Art Unit: 2825

Remarks

10. Applicant argued that Roethig et al. do not teach the second model is an abstraction of the first model. Examiner respectively submits that Roethig et al. teach comparing slack distribution from parasitic estimation model (second model) with reference slack distribution (first model) (Figs. 3A, 3B, 4). The parasitic estimation model (second model) will correlate with reference slack (first model) (col. 6); the second model is an abstraction of the first model.

11. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Conclusion

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vuthe Siek whose telephone number is (703) 305-4958. The examiner can normally be reached on M-F (6:30-4:00) 2nd Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew Smith can be reached on (703) 308-1323. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1782.
